

OPENGEAR ADDS AUTOMATION FOR FASTER PROVISIONING

Australian-founded remote management specialist Opengear has announced the introduction of zero touch provisioning capabilities across its products to speed up large-scale deployments of its out-of-band management technology. It claims to be the first in the industry to offer ZTP as part of out-of-band management solutions. Opengear said the primary benefit of ZTP is not requiring any manual intervention other than connecting the appliance to the network and powering it on.
