ENSURING MAXIMUM UPTIME IN HOSPITALITY

A resilient network is the backbone of successful, daily operations within the hospitality industry. More critical than ever, the network supports the guest experience, staff communications, facility management, security and more.
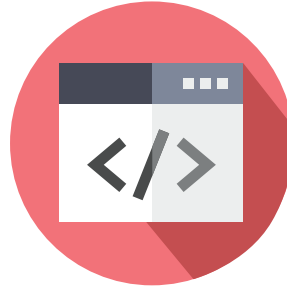

Lacking the necessary technical staff, these environments are growing increasingly complex, with more technologies being added to aging infrastructure and the provisioning of new, distributed sites. As more assets are pushed to the edge to support evolving requirements, hospitality organizations are challenged with the growing threat of disruptions.

To ensure a constantly connected network, these brands need full visibility across every site, with the ability to identify and remediate issues without interrupting business operations.

OUTAGES CAN BE CAUSED IN A VARIETY OF WAYS WHICH INCLUDE:

ISP Carrier Issue   Human Error   Data Breach

Network Resilience

Maximize uptime at each location with *Smart* Out-of-Band (*Smart* OOB™) and Failover to Cellular™. Providing an alternative path to devices, outside of the production network, administrators can monitor and manage infrastructure remotely, without impacting operations.

Enterprise-Grade Security

Ensure the most stringent security and encryption requirements are met with *Smart* OOB. An essential component to every disaster recovery plan, administrators can securely access and manage networks to ensure management policies are enforced.

Secure Provisioning

Provision new sites remotely with Lighthouse Enterprise. From configuration management to initial setup and provisioning, automation tools allows engineers to automate everything from one central location.

Always-On Connectivity

Maintain visibility of the entire network during an outage with Failover to Cellular. By restoring WAN connectivity without manual intervention, hospitality groups can continue to operate while issues are quickly identified and resolved.
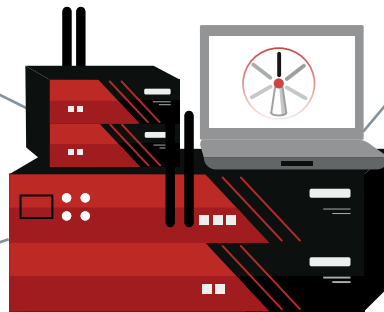

EXTEND YOUR REACH FROM THE CORE TO THE EDGE

EDGE
Ensure uptime at hotels and remote sites

- OM1200 Operations Manager

CORE
Streamline remote management in data centers
